RE: Waste stream analysis for significant concentrations of Appendix VIII
organic constituents.

Dear Mr. Wickwire:

Analysis for significant concentrations of Appendix VIII organic constituents is required by Pratt & Whitney Aircraft, East Hartford as part of the Part "B" incinerator permit application. In lieu of testing for each organic constituent that is listed, Pratt & Whitney Aircraft may use any standard method to determine the total quantity of organic hydrocarbons in the waste stream to be incinerated. The quantity of each known or suspected constituent can then be measured using standard techniques and their quantities summed and compared to the total amount of organic hydrocarbons. If the total quantity of organic hydrocarbons and the sum of the individual suspected components are equal or nearly equal, no further testing for organic constituents would be required.

If there are any questions, call 566-5712, George Dews.

Very truly yours, /

Stephen W. Hitchcock
